SciPy.in 2010, Tutorials

Outline

- 1 Motivation
- 2 Initializing
- 3 Slicing & Striding
- 4 Operations on **arrays**
- 5 Summary

Outline

- 1 Motivation
- 2 Initializing
- 3 Slicing & Striding
- 4 Operations on `arrays`
- 5 Summary

Why arrays?

- Speed!
- Convenience
- Easier to handle multi-dimensional data

Speed

```
In []: a = linspace(0, 100*pi, 1000000)
# array with a million elements
In []: b = []
In []: for each in a:
...:     b.append(sin(each))
...:
...:
In []: sin(a)
```

Convenience

The pendulum problem could've been solved as below::

```
In []: L, T = loadtxt('pendulum.txt',  
                    unpack=True)
```

```
In []: tsq = T*T
```

```
In []: plot (L, tsq, '.')
```

Outline

- 1 Motivation
- 2 **Initializing**
- 3 Slicing & Striding
- 4 Operations on **arrays**
- 5 Summary

Initializing

```
In []: c = array([[11, 12, 13],  
                 [21, 22, 23],  
                 [31, 32, 33]])
```

```
In []: c
```

```
Out []:
```

```
array([[11, 12, 13],  
       [21, 22, 23],  
       [31, 32, 33]])
```

Some special arrays

```
In []: ones((3,5))
```

```
Out []:
```

```
array([[ 1.,  1.,  1.,  1.,  1.],
       [ 1.,  1.,  1.,  1.,  1.],
       [ 1.,  1.,  1.,  1.,  1.]])
```

```
In []: ones_like([1, 2, 3, 4])
```

```
Out []: array([1, 1, 1, 1])
```

```
In []: identity(2)
```

```
Out []:
```

```
array([[ 1.,  0.],
       [ 0.,  1.]])
```

Also available **zeros**, **zeros_like**, **empty**, **empty_like**

Accessing elements

```
In []: c
```

```
Out []:
```

```
array([[11, 12, 13],  
       [21, 22, 23],  
       [31, 32, 33]])
```

```
In []: c[1][2]
```

```
Out []: 23
```

```
In []: c[1,2]
```

```
Out []: 23
```

```
In []: c[1]
```

```
Out []: array([21, 22, 23])
```

Similar to **lists** but improved!

Changing elements

```
In []: c[1,1] = -22
```

```
In []: c
```

```
Out []:
```

```
array([[ 11,  12,  13],  
       [ 21, -22,  23],  
       [ 31,  32,  33]])
```

```
In []: c[1] = 0
```

```
In []: c
```

```
Out []:
```

```
array([[11, 12, 13],  
       [ 0,  0,  0],  
       [31, 32, 33]])
```

How do you access one **column**? – Enter Slicing!

Outline

- 1 Motivation
- 2 Initializing
- 3 Slicing & Striding
- 4 Operations on `arrays`
- 5 Summary

Slicing: Lists

Define a list

```
In []: p = [ 2, 3, 5, 7, 11, 13]
```

```
In []: p[1:3]
```

```
Out []: [3, 5]
```

A slice

```
In []: p[0:-1]
```

```
Out []: [2, 3, 5, 7, 11]
```

```
In []: p[:]
```

```
Out []: [2, 3, 5, 7, 11, 13]
```

Striding: Lists

Striding over p

```
In []: p[::2]
```

```
Out []: [2, 5, 11]
```

```
In []: p[1::2]
```

```
Out []: [3, 7, 13]
```

```
In []: p[1:-1:2]
```

```
Out []: [3, 7]
```

```
In []: p[::3]
```

```
Out []: [2, 7]
```

list[initial:final:step]

Slicing & Striding: Lists

What is the output of the following?

```
In []: p[1::4]
```

```
In []: p[1:-1:3]
```

Slicing: arrays

```
In []: c[:,1]
```

```
Out []: array([12,  0, 32])
```

```
In []: c[1,:]
```

```
Out []: array([0, 0, 0])
```

```
In []: c[0:2,:]
```

```
Out []:
```

```
array([[11, 12, 13],  
       [ 0,  0,  0]])
```

```
In []: c[1:3,:]
```

```
Out []:
```

```
array([[ 0,  0,  0],  
       [31, 32, 33]])
```

Slicing: arrays ...

```
In []: c[:2, :]
```

```
Out []:
```

```
array([[11, 12, 13],  
       [ 0,  0,  0]])
```

```
In []: c[1:, :]
```

```
Out []:
```

```
array([[ 0,  0,  0],  
       [31, 32, 33]])
```

```
In []: c[1:, :2]
```

```
Out []:
```

```
array([[ 0,  0],  
       [31, 32]])
```

Striding: arrays

```
In []: c[::2, :]
```

```
Out []:
```

```
array([[11, 12, 13],  
       [31, 32, 33]])
```

```
In []: c[:, ::2]
```

```
Out []:
```

```
array([[11, 13],  
       [ 0,  0],  
       [31, 33]])
```

```
In []: c[::2, ::2]
```

```
Out []:
```

```
array([[11, 13],  
       [31, 33]])
```

Shape of an `array`

```
In []: c
```

```
Out []:
```

```
array([[11, 12, 13],  
       [ 0,  0,  0],  
       [31, 32, 33]])
```

```
In []: c.shape
```

```
Out []: (3, 3)
```

Shape specifies shape or dimensions of an array

Elementary image processing

```
In []: a = imread('lena.png')
```

```
In []: imshow(a)
```

```
Out []: <matplotlib.image.AxesImage object at 0xa0
```

imread returns an array of shape (512, 512, 4) which represents an image of 512x512 pixels and 4 shades.

imshow renders the array as an image.

Slicing & Striding Exercises

- Crop the image to get the top-left quarter
- Crop the image to get only the face
- Resize image to half by dropping alternate pixels

Solutions

```
In []: imshow(a[:256, :256])
```

```
Out []: <matplotlib.image.AxesImage object at 0xb6
```

```
In []: imshow(a[200:400, 200:400])
```

```
Out []: <matplotlib.image.AxesImage object at 0xb7
```

```
In []: imshow(a[:, :2], :2])
```

```
Out []: <matplotlib.image.AxesImage object at 0xb7
```

Outline

- 1 Motivation
- 2 Initializing
- 3 Slicing & Striding
- 4 Operations on **arrays**
- 5 Summary

Operations: Addition

Operations on arrays, as already mentioned, are **element-wise**

```
In []: a = array([[ -3, 2.5],  
                 [ 2.5, 2]])
```

```
In []: b = array([[ 3, 2],  
                 [ 2, -2]])
```

```
In []: a + b
```

```
Out []:
```

```
array([[ 0. ,  4.5],  
       [ 4.5,  0. ]])
```

Elementwise Multiplication

```
In []: a*b
```

```
Out []:
```

```
array([[ -9.,   5.],  
       [  5.,  -4.]])
```

Matrix Operations using `arrays`

We can perform various matrix operations on `arrays`
A few are listed below.

Operation	How?	Example
Transpose	<code>.T</code>	<code>A.T</code>
Product	<code>dot</code>	<code>dot(A, B)</code>
Inverse	<code>inv</code>	<code>inv(A)</code>
Determinant	<code>det</code>	<code>det(A)</code>
Sum of all elements	<code>sum</code>	<code>sum(A)</code>
Eigenvalues	<code>eigvals</code>	<code>eigvals(A)</code>
Eigenvalues & Eigenvectors	<code>eig</code>	<code>eig(A)</code>
Norms	<code>norm</code>	<code>norm(A)</code>
SVD	<code>svd</code>	<code>svd(A)</code>

Outline

- 1 Motivation
- 2 Initializing
- 3 Slicing & Striding
- 4 Operations on `arrays`
- 5 Summary

What did we learn?

- Arrays
 - Initializing
 - Accessing elements
 - Slicing & Striding
 - Element-wise Operations
 - Matrix Operations
