Design and Architecture

Interactive visualization of data
(think Matlab)

```
Terminal
resting ~ $ ipython -wthread -nobanner

In [1]: from enthought.mayavi import mlab
In [2]: from numpy import ogrid, sin
In [3]: x, y, z = ogrid[-10:10:100j, -10:10:100
In [4]: ctr = mlab.contour3d(0.5*x**2 + y**2 +
```

Demos

- ▶ `mlab.plot3d`, `mlab.surf`
- ▶ Interaction
- ▶ UI configuration
- ▶ Updating data
- ▶ `@mlab.animate`
- ▶ Other functions

Lorenz equation example

$$\frac{dx}{dt} = s(y - x)$$

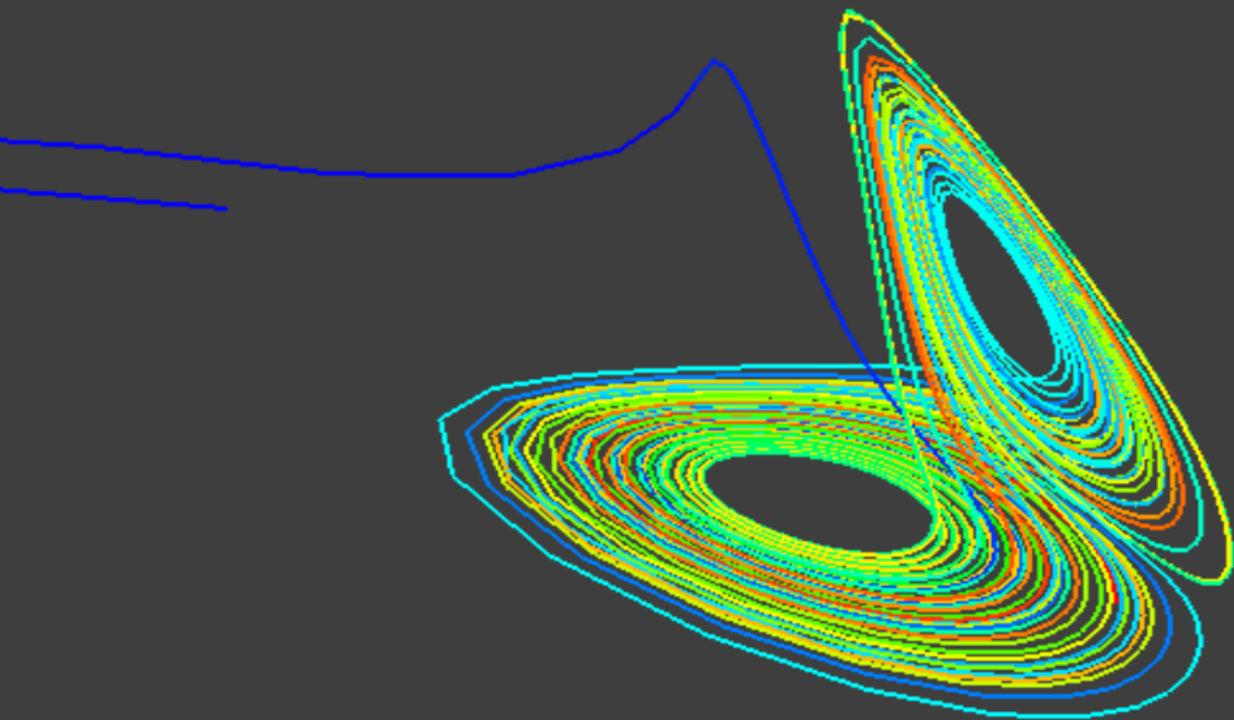

$$\frac{dy}{dt} = rx - y - xz$$

$$\frac{dz}{dt} = xy - bz$$

- ▶ Specifies the evolution of the system
- ▶ Think: Velocity of a particle in 3D
- ▶ Lets trace its path

Summary

- ▶ Interactive
- ▶ Pythonic
- ▶ UI + Application
- ▶ Embeddable/reusable
- ▶ Customizable
- ▶ Many cool features
- ▶ Offscreen capabilities

Flexible library/app
for every one of
these needs!

Overview of architecture

Secrets: Traits

- ▶ Allows for a powerful object model
- ▶ Inversion of control
- ▶ Notifications
- ▶ Easy UIs (works both ways)
- ▶ UIs and scripting are well connected
- ▶ wx and Qt backends available
- ▶ Forces a separation of UI/view from object model

Lessons ...

- ▶ Abstraction layer of mayavi helps
- ▶ `m1ab` was actually an afterthought
- ▶ `m1ab` is extremely important!
- ▶ Automatic function/code generation is a big deal
- ▶ Abstraction of menu generation based on simple metadata allows for great simplification and reuse

Issues

- ▶ Testing: not easy but immensely useful, needs more work
- ▶ Documentation: Sphinx rocks

Thank you!
